COHERENCEBRIDGE CONSULTING

Data Governance & Data Confidence

Building confidence in the information that matters.

Reliable decisions depend on reliable data. Data confidence requires clear ownership, transparent information flows and effective controls throughout the data lifecycle.

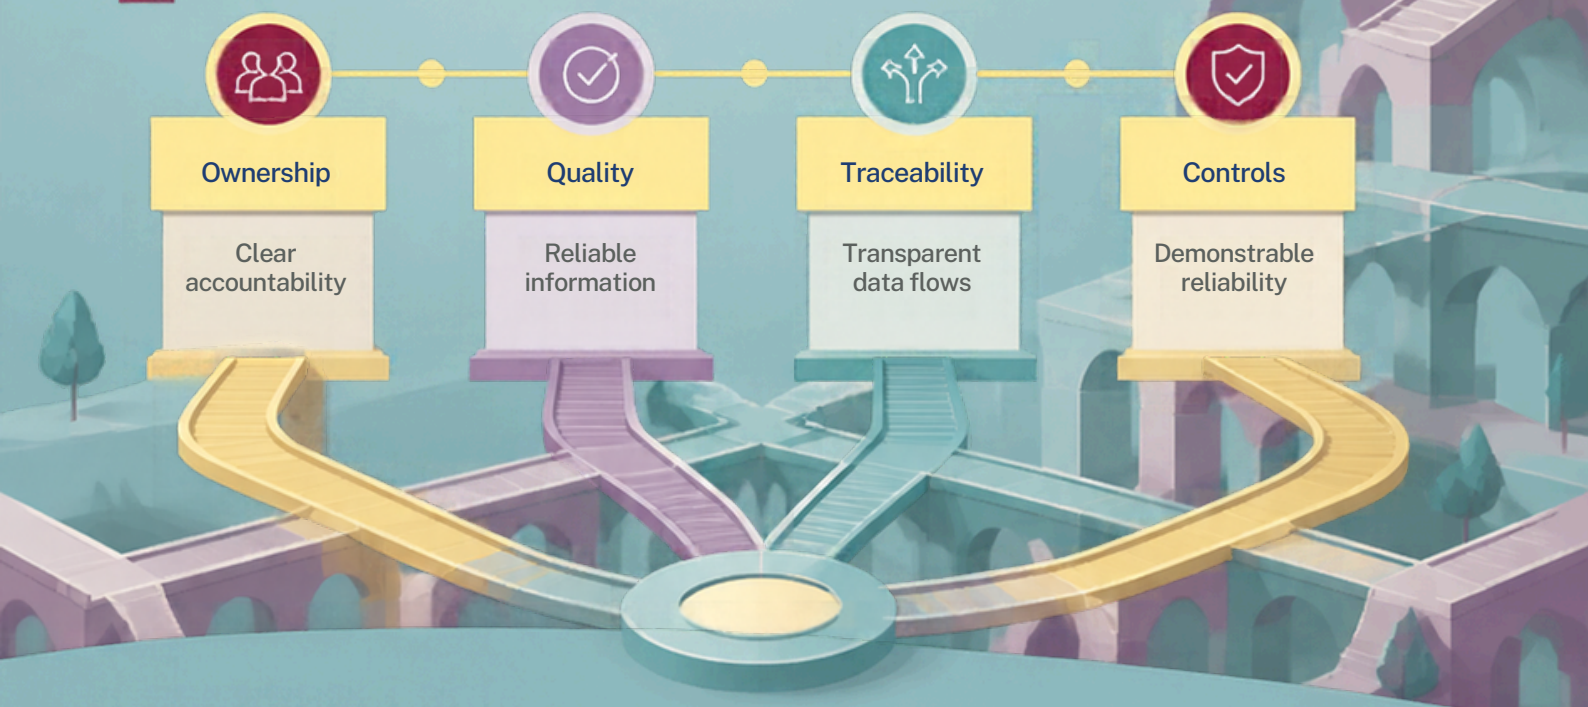

Understanding the challenges

- Poor data quality and reliability
- Unclear data ownership and accountability
- Insufficient data lineage and traceability
- Fragmented data governance structures
- Weak data controls and monitoring

How we support you

- Data governance framework assessments
- Definition of data ownership and responsibilities
- Assessment and improvement of data quality
- Analysis of data flows and lineage
- Identification of critical data and dependencies
- Design and assessment of data controls
- Integration of data governance into business processes
- Development and implementation of improvement initiatives

Four foundations of data confidence

From reliable data to confident decisions
